WHAT IT IS

- A local-first workspace where named AI Staff do real work on the user's machine.
- Staff open the user's files, use installed AI tools, run local models, and produce finished artifacts.
- Built for every role on a team: development, design, operations, support, and planning.

PLATFORMS

- Windows, macOS, and Linux desktop
- Web app
- iPhone app for directing Staff and reading results

AI CONNECTIONS

- Installed tools: Claude Code, Codex, Gemini CLI, Copilot, Cursor, Grok
- Hosted AI built in
- Local models through a catalog install, plus Ollama and LM Studio when already running

WHAT STAFF PRODUCE

- Notes and Reports: Markdown documents
- Canvases: diagrams and visual boards
- Exhibits: interactive pages, dashboards, and presentations

- Binders: structured collections of records and assets, viewed many ways

ALSO IN THE PRODUCT

- Workspaces for project context
- Home Desk for day-to-day tiles and tools
- Scheduled Tasks for unattended work
- Multiplayer AI for a live session with teammates and Staff
- Gallery for sharing and starting from published work

PRICING

- Core app is free for personal and non-commercial use
- Paid plans add features beyond the free core
- Users can bring the AI subscriptions they already pay for
- Local models run on the user's hardware

COMPANY

- Clairvoyance is developed by Stardock Software
- Stardock Software is a desktop software company with three decades of shipping products, including Object Desktop, WindowBlinds, Fences, and Start11
